ACME ANALYTICS

Quarterly Platform Review

Quarterly Platform Review

Revenue reached **\$4.2M in Q3**, up 18% year over year. The gain came almost entirely from the enterprise tier, where seat expansion outpaced new logos for the first time since launch.

Highlights

- Enterprise ARR crossed **\$3.1M**, now 74% of total
- Median time-to-first-value fell from 11 days to *4 days*
- Churn held flat at 1.2% monthly despite the price change

✔ What worked

Self-serve onboarding removed the sales call from the first week. Every cohort since June has activated faster than the one before it.

⚠ Watch this

Support load per account is rising faster than headcount. At the current slope the queue exceeds capacity in ~7 weeks.

Numbers

Segment	Q2	Q3	Change
Enterprise	2.4M	3.1M	+29%
Team	0.9M	0.8M	-11%
Individual	0.3M	0.3M	0%

The enterprise motion is working. The self-serve funnel is not paying for itself yet.

Implementation note

The activation metric is computed nightly:

```
SELECT account_id, min(event_at) AS first_value
FROM   product_events
WHERE  event_name = 'workspace_published'
GROUP BY account_id;
```

Next quarter

1. Hire two support engineers before the queue breaks
2. Re-price the Team tier or sunset it
3. Ship SSO, the top blocker in 9 of 14 lost deals

Risk

The Team tier decline is not yet explained. If it is cannibalisation by Enterprise it is fine; if it is a product problem it will reach Enterprise next.

See the [full dashboard](#) for daily figures.
